DISINFECTION OF CONTACT POINTS

SANI-ZOOM'S STRONG POINTS:

Hand contact areas

Wipe 2.0, a misting wand system with a small power supply to project the micro-droplets disinfectants for a perfect imprint on the objects or surfaces to be disinfected.

The important thing is that the droplets are fine enough to be homogeneous and leave no contamination «space».

LOCKERS DOOR HANDLES.

Mist spraying 1 liter for 75 m² for 100% coverage and spraying at 30 cm (250 m² of surface).

Compatible with most disinfectants.

Very light - 300 grs. Quick nozzle change.

Spears storage on the belt.

1h30 of autonomy.

Let us tell you about our technology:

“

It is important to clean and then disinfect.

Today, the best way to stop the virus is to continue using your regular cleaning methods.

But today, it is important to incorporate in addition to your traditional method, ultra disinfection, and especially on the surfaces that we could neglect a little before, that is to say the points of contact with the hands and places where people can wiggle on it.

The Hexa Zoom is there for that. ”

Non-contractual photos.
