

ELIMINATE 100% OF THE VIRUSES IN 1H*

* When the room is airtight and all surfaces possible to reach

Creation of a dry disinfectant mist throughout the room.

HEXA Room

Ideal for the fight against bedbugs

IDEAL FOR 100% DISINFECTING A PART

SURFACE DISINFECTION NEBULIZER

HEXA-ROOM'S STRONG POINTS:

For the disinfection of **SURFACES** by air. Disinfectant based on degradable organic hydrogen peroxide. A machine that creates a saturation of the ambient air (dry fog effect) loaded with disinfectant molecules. Hexa Room is the ideal product to disinfect a room, a mobile home, a reception after the passage of customers. Can be used without anyone in the room. Versatile, ecological and economical with a dosage of 5ml / m³, it can treat up to 200m³ at once. Both light (5.3Kg) and powerful. Refill volume: 1 L.

Let us tell you about our technology:

“ The standards claimed attest that the **IODVA disinfectant is effective against SARS-CoV2 (as well as SARS-CoV and MERS-CoV) from the coronavirus family.** The dry fog that is generated by our device in the room even reaches the corners and crevices of the room, as well as the undersides of furniture. It thus eliminates unwanted germs such as resistant MRSA bacteria, E. Coli, corona viruses, influenza viruses and more. In addition, it can also be used to eliminate various fungi and yeasts, as well as organic odors. After a «mist time» of at least 25 minutes, the rooms can be reused as usual after one hour with good ventilation. ”
