

ROBOTIC EXTRACTOR OF BIOFILM

Evolution kit
available for any
Chrono or
Premium robot
(Retro Fit)

POOL FLOOR

Eliminates
99,8%
of
bacteria*

THE ARMoured ARM OF YOUR
FILTRATION

VIKING'S STRONG POINTS:

Incomparable results, very economical.

Vacuum and extract the biofilm at within 5 cm of the bottom of the pool.

Reduces the consumption of chemicals.

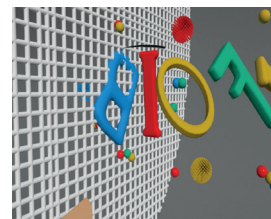

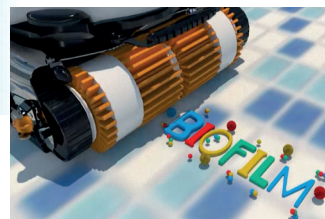

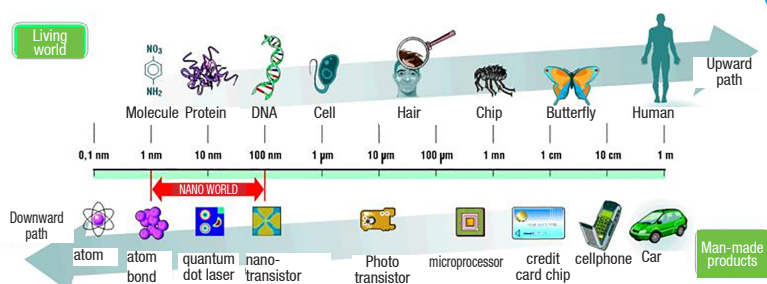

Used to extract bacteria from the bottom of the holding tanks.

Substantial drop in the level of chloramines.

A technology unique in the world * (* International patent pending).

Frontiers of the nano world:

Pool cleaners cannot take anything under 5 microns and hold it in their internal filter, therefore they cannot retain viruses and biofilm. It is imperative that debris is removed externally and then drained back into your main filtration via a drain or put to waste.

Non-contractual photos.
